SUMMARY

Mechanical Engineering student specializing in translating complex datasets into actionable business insights through Machine Learning and statistical modeling. Proven expertise in building end-to-end analytical frameworks—from data engineering to cloud deployment—to solve high-impact optimization and predictive challenges.

EDUCATION

Degree/Certificate	Institute	Grade	Year
B.Tech., Mechanical Engineering	Punjab Engineering College, Chandigarh	8.16/10	2023-present
Class 12 th (CBSE)	Delhi Public School, Rewari	93.2%	2022
Class 10 th (CBSE)	Delhi Public School, Rewari	95.6%	2020

TECHNICAL EXPERIENCE

Diabetes Risk Stratification | Healthcare Analytics

- Developed a diagnostic engine to identify high-risk patients by performing EDA and preprocessing on clinical datasets using Pandas and Scikit-learn.
- Benchmarked multiple ML classifiers (e.g., Logistic Regression, Random Forest), selecting the optimal model based on Recall and F1-Score to minimize false negatives.
- Enabled model portability by serializing the final classifier with Pickle, allowing for integration into predictive health applications.
- Used a **Confusion Matrix** to prioritize high recall, minimizing **False Negatives** to mitigate the high costs of undetected high-risk cases

Movie-Based Recommender

- ML Engine:** Built a recommendation system using **Vectorization** and **Cosine Similarity** to process 5,000+ movies based on metadata like genre, cast, and plot.
- Data Engineering:** Pre-processed raw datasets involving string-to-list conversions, feature merging, and handling missing values.
- Deployment:** Managed the full lifecycle from local development to cloud hosting on **Render**, utilizing **Git LFS** for large model storage.
- API Integration:** Implemented real-time metadata fetching via RESTful APIs with error handling for rate limits and missing assets.

IPL 2025 Data Analysis – Microsoft Excel

- Cleaned and organized raw IPL player stats using Excel formulas and data validation.
- Crafted dashboards in Tableau to drive planning and visual reporting.
- Applied pivot tables to summarize team-wise performance and boundary distributions **to identify high-impact player trends**

SKILLS & INTERESTS

- Technologies:** MS Excel, MS PowerPoint, Python, Power BI, C++, Machine Learning (Scikit-Learn, Pandas, NumPy)
- Interests:** Football, Reading, Music, Piano
- Languages:** Hindi, English, Spanish (Beginner)
